

Pushpendra Yadav

Staff Frontend Engineer & Engineering Lead | React, TypeScript, Frontend Architecture, Design Systems | AI-Native Development & People Management

Indore, India (open to relocation) • +91 8982266558 • pushpendra.y2011@gmail.com
pushpendra.dev • github.com/tad-bit-better • linkedin.com/in/pushpendrayadav2011

PROFESSIONAL SUMMARY

Staff Frontend Engineer and engineering lead with 12+ years of experience owning the architectural vision for complex, high-scale React and TypeScript platforms, and 5+ years combining technical leadership with direct people management. Specialised in frontend platform strategy (scalable component systems, design systems, micro-frontend architecture, client-side data architecture and performance engineering) and in AI-native engineering: LLM-assisted development workflows, codemod-driven large-scale migrations, and MCP-based Figma-to-code pipelines that generate UI from a governed component library. Managed pods of 5–6+ engineers across multiple frontend tracks, owning capacity planning, performance reviews, promotions and hiring, while scaling products 0→1 and 1→10 and reducing tech debt by 75%. Recently designed, built and shipped two open-source, local-first products end to end (**VitalDelta**, **Thumbline**). Seeking a Staff Frontend Engineer / Frontend Architect role to define long-term frontend strategy, platform standards and AI-augmented developer workflows for a high-scale product organisation.

CORE SKILLS

Frontend Architecture: Frontend Platform Strategy, Micro-frontends, Module Federation, Design Systems, Component Libraries, Monorepos (Nx, Turborepo, pnpm workspaces), Local-first & Privacy-by-Design Architecture, Tech-Debt Reduction, Large-Scale Migrations

AI-Native Development: LLM-assisted coding (Cursor with project rules, Claude Code, Copilot), agent-ready repos (AGENTS.md / CLAUDE.md), MCP (Model Context Protocol) integrations — Figma-to-code generation against reusable library components, AI-assisted test generation and PR review, codemod-driven refactoring (jscodeshift)

Core Stack: React.js, TypeScript, JavaScript (ES6+), Next.js (SSR / SSG / ISR), HTML5, CSS3

State & Data: Redux, Zustand, TanStack Query (React Query), Client-side Data Architecture, Caching Strategies, IndexedDB (Dexie), REST, GraphQL

Build & Tooling: Webpack 4→5 migration, Vite, Rollup, Bundle Optimization, Code Splitting, Tree Shaking, ESLint, Prettier, Codemods

Performance & Web: Core Web Vitals, Lighthouse, Browser Rendering & Internals, Web APIs, Web Audio API, WebAssembly, Web Workers, Virtualization, Lazy Loading, SEO

Quality & Security: Jest, Vitest, React Testing Library, Cypress, Unit / Integration / E2E Testing, TDD, WCAG 2.1 Accessibility, GDPR, Content Security Policy (CSP), XSS / CSRF Mitigation

Design & Delivery: Storybook, Figma (design tokens, design-to-code), GitHub Actions, CI/CD Pipelines, Docker, Nginx, Vercel, Sentry / Observability, Agile / Scrum

People & Engineering Management: Managing pods of 5–6+ engineers, Resource & Capacity Planning, Performance Reviews & Evaluations, Promotion Recommendations, 1:1s & Coaching, Hiring & Interviewing, Performance Management, Frontend Roadmaps, Architecture Reviews / RFCs, Mentoring Senior Engineers

PROFESSIONAL EXPERIENCE

Independent Software Engineer

Feb 2026 – Present

Remote | Designing, building and shipping open-source, privacy-first web products end to end: product definition, architecture, design and delivery

VitalDelta — vitaldelta.app · github.com/tad-bit-better/vitaldelta · MIT

- Built and launched a local-first web app that turns lab-report PDFs into per-marker trend charts, so patients can show doctors how their values change between tests. No backend and no accounts: all parsing and storage happen on the user's device.
- Designed a lab-agnostic extraction pipeline that maps marker synonyms to LOINC codes and deterministically parses values, units and reference ranges; shipped as a pure TypeScript package decoupled from the React/Vite app for reuse in the planned mobile client, covered by 171 tests across 22 suites.
- Made privacy architectural: a strict Content Security Policy makes the no-network guarantee verifiable, and IndexedDB (Dexie) storage sits behind a single interface with a session-only mode for shared computers. Took it from idea to production in about a week using AI-agent-driven development.

Thumbline — thumbline.app · github.com/tad-bit-better/thumbline · AGPL-3.0

- Built and launched a Next.js web app that listens to a song clip and generates playable right-hand guitar arrangements in three styles (arpeggio, fingerstyle, flamenco) at three difficulty levels, with a chord-review step and speed-adjustable playback synced to the original recording.
- Architected an Nx monorepo with separate packages for in-browser audio analysis (essentia.js on WebAssembly, so audio never leaves the device), the arrangement engine, notation renderer, playback and UI library; typed data contracts and a pattern DSL encode per-note technique (p-i-m-a fingering, rasgueado, alzapúa, golpe).
- Defined the design system and motion language (design tokens, Storybook interaction tests) and an 8-milestone roadmap with acceptance criteria.

Coodlesome.com — family-run home business

- Took the business online with a custom Next.js storefront (SSR/SSG, product listings, cart and checkout), enabling online orders for the first time.
- Owned hosting, DNS, HTTPS, SEO (structured data, Open Graph, sitemaps) and Core Web Vitals optimisation for fast first paint on mobile.

Tech Lead / Frontend Lead Developer (Engineering Lead, 5-6+ engineers)

May 2022 – Jan 2026

Leena AI | Gurgaon, India — enterprise HR SaaS platform

- Defined and owned the frontend architectural vision for multiple product modules, scaling them from 0→1 (greenfield) and 1→10 (growth); set architecture, component strategy and delivery pipelines that supported rapid enterprise customer onboarding.
- Managed a pod of 5-6+ engineers across frontend tracks (workflow automation, document management, webviews, reusable libraries): owned capacity planning, ran performance review cycles, recommended promotions, held regular 1:1s and handled performance management; defined role requirements, interviewed and onboarded new hires. Retained ~80% of the original team over a 3.5-year tenure.
- Led migration of large React applications from Webpack 4 to Webpack 5 + Module Federation using codemod-driven, automated refactoring; reduced frontend tech debt by 75% and established micro-frontend architecture guidelines adopted across product teams.
- Built an MCP-based Figma-to-code pipeline that generates production UI from Figma designs while enforcing the reusable component library and design tokens; introduced AI-native practices team-wide (LLM-assisted coding with shared project rules, AI-generated unit tests, AI-assisted PR review) with humans accountable for architecture and review.
- Built a scalable UI component library and design system with Product and Design (design tokens, component contracts, Storybook visual testing, WCAG compliance), enabling consistent UX across 5+ product lines and cutting frontend development time by 30-40%.
- Architected a GDPR-compliant Document Management System with a universal file viewer (PDFs, Office docs, images) adopted by multiple enterprise customers, and a visual workflow automation platform (node-based builder + drag-and-drop form builder) that reduced configuration and onboarding time by 70%; designed the client-side data architecture on TanStack Query (normalised server state, cache invalidation, optimistic updates).
- Reduced initial load time by ~30% (bundle optimisation, code splitting, lazy loading, list virtualisation); hardened security (CSP, XSS mitigation, secure sessions, dependency audits); established CI/CD on GitHub Actions, a test-driven culture (Jest, RTL, Cypress) and the RFC/design-doc process; mentored 6+ engineers, including seniors upskilled to own architectural decisions.

Technical Lead (Engineering Lead, 5 engineers)

Jun 2021 – Apr 2022

Ferns and Petals (FNP.com) | Delhi, India — high-traffic ecommerce

- Led frontend architecture and development for multiple B2B portals, including store and delivery-agent systems; managed the frontend team's sprint planning, capacity allocation, reviews and delivery commitments.
- Improved Core Web Vitals for customer-facing applications, leading to measurable SEO ranking and load-performance gains; optimised React rendering, image delivery, caching and API handling for high-traffic flows.
- Drove test coverage initiatives across legacy and new modules; introduced an observability pipeline (Sentry + custom logging) that reduced defect detection and resolution time; maintained CI/CD workflows for rapid, stable releases.

Technical Lead (Engineering Lead, 5 engineers)

Apr 2020 – Jun 2021

Datafoundry AI | Bangalore, India

- Architected the frontend for mSafety, an enterprise Pharmacovigilance & Cosmetovigilance platform used by major pharma and cosmetics companies, built from the ground up on a micro-frontend architecture with independent deployments.
- Created a centralised reusable UI component library, improving cross-module consistency and developer velocity.
- Managed a team of 5 engineers end to end: hiring input, 1:1s, code reviews, sprint planning, deployments, release management and performance feedback.

Business Technology Analyst / System Engineer

Apr 2016 – Mar 2019

Deloitte | Mumbai, India

- Developed frontend and backend features (React, JSP, Servlets) for US federal healthcare eligibility systems (Montana DPHHS, Rhode Island DHS).
- Built React components integrated into Salesforce CRM; member of the Browser Compatibility Team creating custom polyfills for legacy Internet Explorer.

Staff Software Engineer

Jul 2014 – Apr 2016

Nenosystems Consulting Pvt Ltd | Indore, India

- Built modules for a large-scale Vehicle Tracking System (driver activity and log tracking) across cross-functional teams, improving real-time tracking reliability.

EDUCATION

Bachelor of Engineering – Computer Science Engineering

2014

Lakshmi Narain College of Technology, Indore
